

Pre-Existing Medical Condition Waiver

Pet's Name: _____

Valley View Animal Hospital provides general boarding and is not staffed as a medical boarding facility. General pet boarding provides basic care, including feeding, exercise, mental stimulation and basic medication administration. Pets in our care can be left unattended for up to 12 hours overnight, and if an emergency were to occur, no personnel would be present.

Medical boarding provides 24/7 monitoring and access to medical care at any point during the pet's stay. For some pre-existing conditions, medical boarding is recommended for the safety of the pet. We do not provide medical boarding at Valley View Animal Hospital.

At Valley View Animal Hospital boarding, we require a veterinarian's examination, and a completed veterinary release every 6 months for pets with pre-existing medical conditions. Even though this helps establish safety of your pet for general boarding, there is still the potential for a life-threatening event to occur that could lead to complications including death.

Valley View Animal Hospital will ensure your pet receives current medication at appropriate times during business hours as indicated on your pre-boarding medical information form. If there are any concerns with how to administer these medications, please discuss this at the time of check-in.

During normal business hours, if boarding staff have any concerns regarding your pet's health, a veterinarian on staff will be notified, any necessary diagnostics and treatments will be performed, and you will be responsible for payment. The staff will make every effort to contact you during this time but will not delay assessment or treatment of your pet for communication.
